

# SDSC Summer Institute Deep Learning

# Deep Learning

Deep Learning is a subfield of Machine Learning

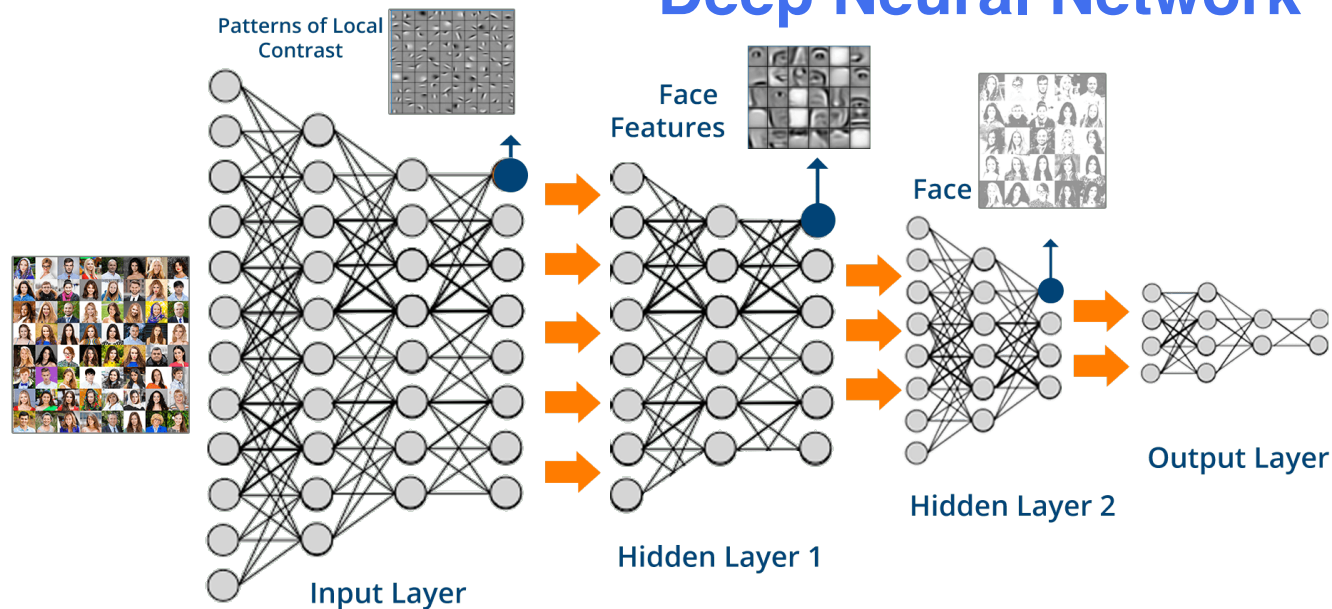

# Deep Learning

## Neural Network

[http://www.astroml.org/book\\_figures/appendix/fig\\_neural\\_network.html](http://www.astroml.org/book_figures/appendix/fig_neural_network.html)

## Deep Neural Network

<https://cdn.edureka.co/blog/wp-content/uploads/2017/05/Deep-Neural-Network-What-is-Deep-Learning-Edureka.png>

- **‘Deep’ refers to the many layers in model**
  - Allows for learning at different levels of abstraction
  - Leads to automatic feature learning & excellent performance

# Applications of Deep Learning

- **Image classification**
- **Speech recognition**
- **Handwriting recognition**
- **Self-driving cars**
- **Drug design**
- **Precision medicine**
- **Disease detection**
- **Targeted ads**
- **Stock market analysis**

# Deep Learning Agenda

**8:30 - 9:00 – Intro to NN & CNN**

**9:00 - 9:30 – MNIST Hands-On**

**9:30 - 10:00 – CNN Transfer Learning**

**10:00 - 10:15 – Break**

**10:15 - 10:45 – CNN Transfer Learning Hands-On**

**10:45 - 11:15 – FasterCNN**

**11:15 - 11:45 – U-Net & LSTM**

**11:45 - 12:00 – Wrap-Up**

# Transfer Learning with CNN

Mai H. Nguyen, Ph.D.

# What is Transfer Learning?

- **To overcome challenges of training model from scratch:**
  - Insufficient data
  - Very long training time
- **Use pre-trained model**
  - Trained on another dataset
  - This serves as starting point for model
  - Then train model on current dataset for current task

# Transfer Learning Approaches

- **Feature extraction**

- Remove last fully connected layer from pre-trained model
- Treat rest of network as feature extractor
- Use features to train new classifier (“top model”)

- **Fine tuning**

- Tune weights in some layers of original model (along with weights of top model)
- Train model for current task using new dataset

# CNNs for Transfer Learning

- **Popular architectures**
  - AlexNet
  - GoogLeNet
  - VGGNet
  - ResNet
- **All winners of ILSVRC**
  - ImageNet Large Scale Visual Recognition Challenge
  - Annual competition on vision tasks on ImageNet data

# ImageNet

- **Database**

- Developed for computer vision research
- > 14,000,000 images hand-annotated
- > 22,000 categories

- **ILSVRC History**

- Started in 2010
- Image classification task: 1,000 object categories
- Image classification error rate
  - 2011: ~25% (conventional image processing techniques)
  - 2012: 15.3% (AlexNet)
  - 2015: 3.57% (ResNet; better than human performance)
  - 2016: 2.99% (16.7% error reduction)
  - 2017: 2.25% (23.3% error reduction)

# Why Does Transfer Learning Work?

*Input*

*Output*

*Learned hierarchy*

Lee et al. 'Convolutional Deep Belief Networks for Scalable Unsupervised Learning of Hierarchical Representations' ICML 2009

# VGG as Pre-Trained Network

# Transfer Learning – Feature Extraction

Source: <https://www.cs.toronto.edu/~frossard/post/vgg16/>

# Transfer Learning – Fine Tuning

Source: <https://www.cs.toronto.edu/~frossard/post/vgg16/>

# When & How to Fine Tune

- **New dataset is small & similar to original dataset**
  - Extract features from higher layer and feed to separate classifier
- **New dataset is large & similar to original dataset**
  - Fine tune top or all layers
- **New dataset is small & different from original dataset**
  - Extract features from lower layer and feed to separate classifier
- **New dataset is large & different from original dataset**
  - Fine tune top or all layers

# Other Practical Tips

- **Learning rate**
  - Use very small learning rate for fine tuning. Don't want to destroy what was already learned.
- **Start with properly trained weights**
  - Train top-level classifier first, then fine tune lower layers.
  - Top model with random weights may have negative effects on when fine tuning weights in pre-trained model
- **Data augmentation**
  - Simple ways to slightly alter images
    - Horizontal/vertical flips, random crops, translations, rotations, etc.
  - Use to artificially expand your dataset
